

Is the reliability and efficiency of your equipment tied to your profit?

Ninety percent - 90% - of power quality issues are caused by the operation of your own equipment.

The advantage of the EP Power Performance System is its unique ability to absorb the harmful transient surges and high frequency noise rather than returning these damaging anomalies back into the ground or connected electrical system.

EP Products Specified:

- EP-2000 Field Protection
- EP-2500 Switchgear Protection

GRAND CASINO COUSHATTA, Louisiana

The Situation:

The Grand Casino Coushatta was experiencing **significant loss of electronic slot machines, lighting circuit costs, tingle shock instances** at the RV park, glitches associated with presentation equipment at the convention center and POS terminal failures, and wanted to also protect their audio/video electronics equipment and irrigation system.

The EP Solution:

EP-2500 and EP-2000 products were installed at an "out building" known as "the tent" which housed 800 electronic slot machines that had previously been experiencing downtime.

The Result:

Over the course of two years, the casino Director of Facilities Management noticed the **failure rate and downtime associated with the slot machines located in "the tent" was dramatically lower than elsewhere across the property.** This led the Grand Casino Coushatta to roll-out 400 EP units across their entire property protecting the main casino, hotel, convention center, golf course, RV park, theater, and other out-parcel properties owned by the tribe.
