

Is power quality an issue for residential consumers?

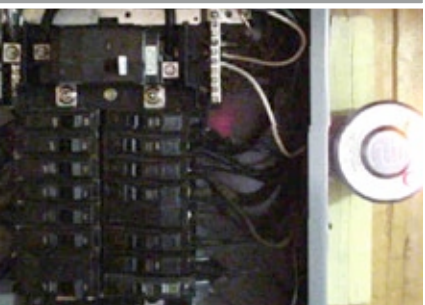

Ninety percent - 90% - of power quality issues are caused by the operation of your own equipment.

The advantage of the EP Power Performance System is its unique ability to absorb the harmful transient surges and high frequency noise rather than returning these damaging anomalies back into the ground or connected electrical system.

EP Products Specified:

- EP-2000 Field Protection
- EP-2500 Switchgear Protection
- EP-2700 High Frequency Filtration
- EP-2750 Ground Filtration

KAREN PRICE RESIDENCE President, Morrow-Meadow Corporation

The Situation:

As President of one of the largest electrical contractor businesses in North America, Ms. Price was well aware of the power quality issues she was experiencing in her private residence. **These issues included premature lamp loss, lamp flickering, periodic Wi-Fi network loss and motor irregularity from the HVAC system.**

The EP Solution:

The home was outfitted with the EP-2500, EP-2000, EP-2700 and EP-2750 products.

The Result:

Three weeks after installing the EP product line, Ms. Price was impressed enough by the **performance and value of the EP products** by her own personal experience, that she is now introducing the EP technology to some of Morrow-Meadows' largest, most highly valued clients on the West Coast.
